

NSPG News Update, June 2018

With a great sense of satisfaction and pride, NSPG is pleased to report that we have completed the construction on the final two 500 kW fixed ground mount solar projects at the Industrial Park.

This completes the project execution of all of our contracted solar projects and ushers in a recess in our construction activities, which have been going full-pace since 2011.

At NSPG, we welcome the break in construction while we set future strategies for development and investigate new business opportunities. We are looking at some interesting prospects.

We remain busy with all of our Operations and Maintenance engagements around our Town and on the river. We are saving up money for the future.

We tip our hats to all of our NSPG team members, past and present, who helped bring us to this stage of accomplishment.

With 200 acres of solar projects at the Industrial park and 69 more at various homes and buildings around Blind River, we have a lot to be proud of. May the sun shine on!
